

Model No: HD-100E

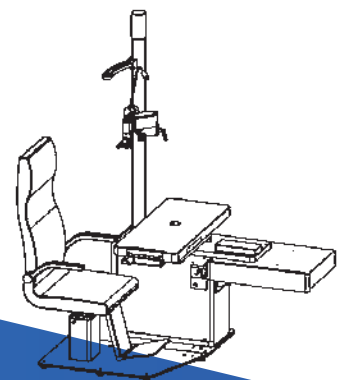

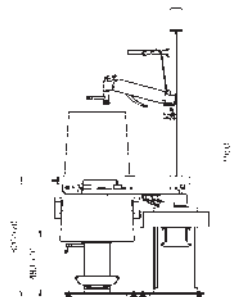

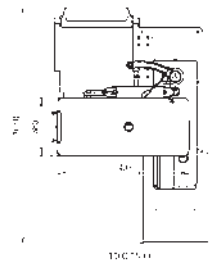

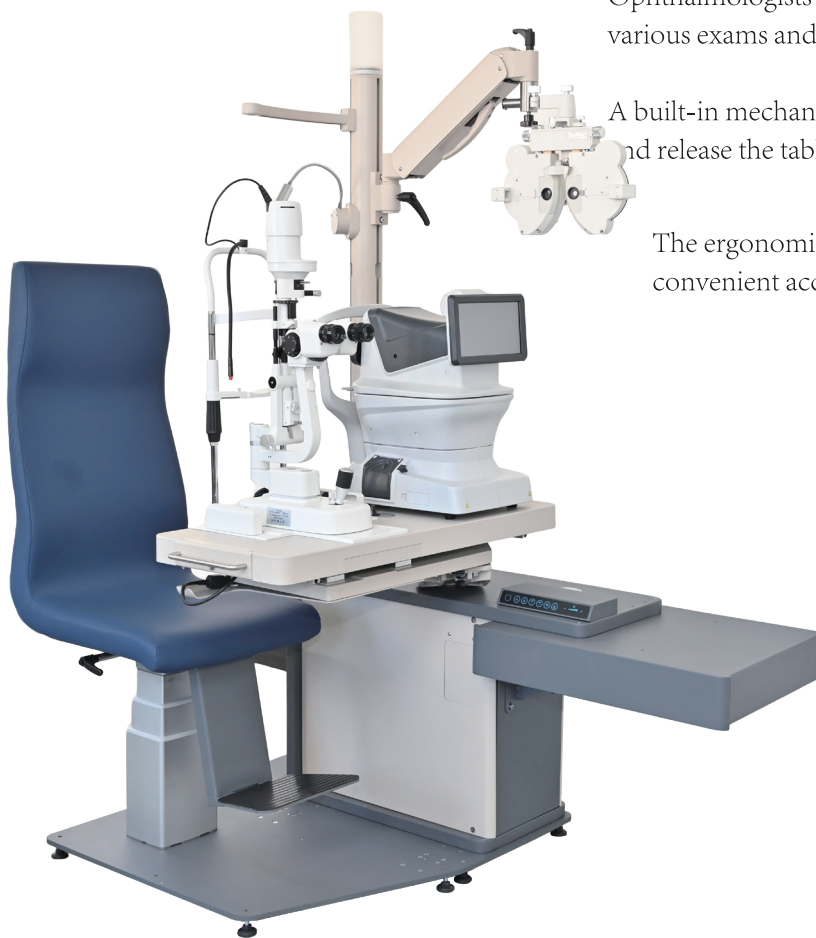

Hongdee proudly presents to our customers worldwide the latest Ophthalmic refraction unit design, model HD-100E featuring a compact size, sliding tabletop, and reclining chair to comfortably accommodate patients while meeting the exam needs of Eyecare professionals in exam rooms with limited space.

The sliding tabletop not only rotates but also elevates up and down to accommodate patient, Ophthalmologist and technician height positioning during eye exams and procedures. At the same time, it can also seat two instruments, like a slit lamp and auto refractometer or NCT, allowing Ophthalmologists and Optometrists to more conveniently perform various exams and procedures.

A built-in mechanical lock mechanism allows the doctor to easily lock and release the tabletop at any angle.

The ergonomically designed touch bar control panel offers convenient access to all control within easy reach.

Features

1. Easy installation with an option of left-handed or right handed set up at the customer's request at time of order
2. Sliding tabletop fits two instruments with adjustable height
3. Rotary chair with reclining function
4. Easy pull-up and push-down adjustable phoropter arms
5. Touch bar control panel offers convenient access to all controls
